Radar Station

1. A radar station of the TOKEN type is located on the south side of the Lyubimets-Svilengrad road about nine kilometers outside of Svilengrad. Ten low stone buildings about 40 meters long are also located here. Many troops were seen here with signal corps epaulets. Southeast of this position there was an observation post with about three or four people.

Radio Station

- 2. Eleven kilometers east of Pleven and about 500 meters south of the Pleven-Levski road, there is an important radio station which must have been recently constructed because it did not seem to exist in August 1954. This station, which is located on a large field, includes two groupstoful installations? The one on the east side included two metal tubular masts 30 tooks meters highest tached to sockets in concrete and other smaller masts.
- 3. Further south, about 1 1.5 kilometers from the road there were some other important buildings. The second installation is another, but less important, radio station. It is about 500 meters west of the first and is surrounded by about ten antenna towers and some small buildings. (See sketch below.)
